SUMMARY

Passionate Full-Stack and AI Developer with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Experienced in designing and developing scalable, secure, and responsive web applications using React.js, Node.js, Express.js, and MongoDB, along with AI-powered applications using LLMs, RAG, LangChain, and vector databases. Proficient in REST APIs, authentication, real-time communication, database design, embeddings, and prompt engineering, with a focus on building clean, maintainable, and efficient solutions. Eager to leverage strong problem-solving skills and modern software engineering and AI practices to build impactful products in collaborative development environments.

EDUCATION

Pimpri Chinchwad College of Engineering, Pune Aug 2023 – Present

Bachelor of Technology (B.Tech) in Computer Engineering CGPA: 8.02

Relevant Coursework: Object-Oriented Programming (OOP), Operating Systems (OS), Design and Analysis of Algorithms (DAA), Machine Learning (ML), Data Structures and Algorithms (DSA), Computer Networks and Security(CNS)

TECHNICAL SKILLS

Languages: C++, JavaScript, SQL, Python

Frontend: HTML5, CSS3, React.js, Bootstrap, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Socket.IO, JWT Authentication, FastAPI

AI & GenAI: RAG, LLMs, NLP, AI Agents, Prompt Engineering, Vector Databases, LangChain, Embeddings, Gemini API

Databases, Cloud & Tools: MongoDB, MySQL, Firebase, Cloudinary, AWS (EC2, S3), Git, GitHub, VS Code, Docker, n8n

PROJECTS

Codebase Knowledge & Debugging Platform *LangChain · Hybrid RAG · FastAPI · ChromaDB · Gemini API · React*

- Built an end-to-end Retrieval-Augmented Generation (RAG) platform to index and query full-stack codebases, enabling grounded architectural Q&A and automated root-cause error diagnostics.
- Orchestrated a hybrid RAG pipeline using LangChain, fusing dense semantic search (Gemini, ChromaDB) with sparse lexical BM25 retrieval and reranking to reduce LLM hallucinations.
- Implemented AST-aware syntax chunking and multi-turn LangChain conversation memory with a FastAPI-React UI, delivering real-time responses with exact file and route citations.

Grandel *React.js · Node.js · Express.js · Cloudinary · Groq API*

- Built a full-stack property booking platform with secure guest and host authentication, plus a centralized host dashboard for managing property listings and bookings through a clean, responsive interface.
- Developed dynamic listing management tools with real-time pricing algorithms and interactive map integration, and added a Groq-powered AI travel assistant that delivers personalized property recommendations to guests instantly.
- Implemented secure payment gateway integration and automated booking confirmations to streamline the user experience, ensuring every financial transaction and reservation is handled reliably and efficiently end to end.

TNP AutoFill *JavaScript · Chrome Extension API · chrome.storage.local*

- Built a Chrome extension that auto-fills Training And Placement Google Forms using a locally saved student profile, eliminating repetitive manual data entry across multiple placement drives, with fully offline and privacy-first storage using `chrome.storage.local`.
- Engineered a content script to dynamically detect and map Google Form fields, supporting academic details, coding profiles, GitHub and LinkedIn links, and custom fields with high fill accuracy, without relying on external servers or databases.

ACHIEVEMENTS

- Solved 300+ Data Structures and Algorithms problems across LeetCode, CodeChef, and Codeforces.
- Secured a place among the **Top 40 teams** in the **Capgemini Exceller AgentifAI Buildathon 2026** by developing an AI-powered virtual laboratory platform featuring RAG-based learning assistance, intelligent code debugging, and faculty analytics dashboards.
- Earned the **Agentic AI Certified Foundations Associate** certification, demonstrating foundational knowledge of agentic AI concepts, architectures, and applications.
